

# Vascular Anomalies Clinic (VAC)

**Kapi'olani Medical Specialists offers a multi-subspecialty clinic that is focused on the diagnosis, management and treatment of vascular malformations.**

The Vascular Anomaly Clinic (VAC) is designed to evaluate arterial, venous, lymphatic and mixed vascular malformations. Our multi-subspecialty clinic brings together a diverse group of medical providers to evaluate each patient and determine appropriate management.

The VAC group meets quarterly and includes pediatric, plastic and ENT surgeons, a cardiologist and radiologist. Patients and families have the opportunity to be evaluated by the entire team during one appointment. Plans of care are discussed by the group and options are presented to patients and families that same day.

We hope that this multi-subspecialty approach will provide timely and effective care for children with vascular malformations.

Referrals to VAC are made through the Pediatric Surgery Clinic. Kindly refer your patients to the Pediatric Surgical Department at Kapi'olani Medical Center for Women & Children for initial evaluation. Prior to your appointment we will determine if additional imaging or testing is needed.

**For questions or referrals, please call 808-983-6210 to begin the process.**
