

Screening is your best defense against breast cancer

*Straub offers state-of-the-art digital mammography
at a neighborhood clinic near you.*

About 800 women in Hawai'i will be diagnosed with breast cancer this year. Annual mammograms are the only proven way to protect yourself.

What's the advantage of digital mammography? Unlike film, digital images appear quickly on high-resolution monitors so our radiologists can zoom in for a closer look. The images are clearer, with much less need for retakes - reducing the patient's exposure to X-rays. Digital images can be transmitted quickly, stored easily and copied without losing information.
